## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 14 provides for the use of a biodegradable polymer, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 14 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1755

Claims 1-3 and 5-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Stockl et al (US Patent 4,883,714).

Stockl et al teach an aqueous printing ink comprising the components 1) from about 4 to about 80 percent by weight of one or more polyester material (binder), 2) from about 1 to about 60 percent by weight of pigment material, 3) from substantially none to about 90 percent by weight of water (solvent), and 4) from about 0.05 to about 30 percent by weight of polyvinyl alcohol (biodegradable polymer) (abstract and col. 2 line 25-col. 3 line 21). The reference also teaches that the composition may be used as a flexographic composition (col. 1 line 64-col. 2 line 24). See example show method for preparation of the composition. The composition as taught by Stockl et al appears to anticipate the claimed invention.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carumpalos et al (US Patent 4,163,001).

Carumpalos et al teach a water base flexographic dye ink comprising a laked alkali stable basic dye, a liquid medium consisting of butyl carbitol (diethylene glycol monobutyl ether), water, dissolved sodium benzoate, a nonionic surfactant, a defoamer,

Art Unit: 1755

a dissolved acrylic acid resin and sufficient amino alcohol (abstract and col. 1 lines 44-50). The reference further teaches that the nonionic surfactant include polyvinylalcohol and polyvinylpyrrolidone (col. 4 lines 5-7). Propylene glycol may be added to the composition (col. 4 lines 43-46).

Carumpalos et al fails to specifically exemplify the use of biodegradable polymer as claimed by applicant. Therefore, it would have been obvious to one of ordinary skill in the art to use the biodegradable polymer as claimed by applicant as Carumpalos et al also discloses the use of biodegradable polymer (i.e. polyvinyl alcohol and polyvinyl pyrrolidone) but shows no example incorporating them.
